

# ENERGY RV-K FOC RV-K

VOLTAGE: 0.6/1 kV

## STANDARDS

UNE 21123-2 - Constructive standard

UNE-EN 60332-1 - Flame retardant

IEC 60332-1 - Non flame spreader

IEC 60502-1

## BUILDING

### CONDUCTOR:

Copper, flexible class 5

### ISOLATION:

Cross-linked polyethylene (XLPE)

### OUTER SHEATH:

Polyvinyl chloride (flexible PVC), **Black** colour.

## APPLICATIONS AND MAIN FEATURES

ENERGY RV-K FOC cables are flexible cables for use in low voltage power distribution in indoor and outdoor fixed installations. They are distinguished by their flexibility and manageability, which facilitate and save time during installation.

The ENERGY RV-K FOC cables comply throughout their range with the Non-Propagation of Flame according to the UNE-EN 60332-1-2 standard (corresponding international standard IEC 60332-1-2). The UNFIRE variant also complies with the Non-Propagation of Fire according to the UNE-EN 50266 standard (corresponding international standard IEC 60332-3).

From a section of 50 mm<sup>2</sup> inclusive, the SECTORFLEX configuration is offered with a flexible sector conductor which, while maintaining the same electrical performance and the same terminals and conventional accessories as the circular cable, achieves a smaller diameter and weight of the cable, significantly increasing its manageability and ease of installation.

ENERGY RV-K FOC cables are certified products with the AENOR mark.

Maximum conductor temperature: +90 °C.

Minimum working temperature: -25 °C.
